(75) Ittle: PHARMACEUTICAL USES OF BISPHOSPHONATES

(76) Abstract: A method of treating a patient suffering from a malignant disease comprising administering to the patient an effective amount of a chemotherapeutica agent selected from the group consisting of: taxol, a derivative thereof and letrozole, followed sequentially by a method of treating a patient suffering from a malignant disease comprising administering to the patient an effective amount of a bisphosphonate. The invention further provides a method of treating a patient suffering from a malignant disease comprising administering to the patient an effective amount of a bisphosphonate followed sequentially by a method of treating a patient suffering from a malignant disease comprising administering to the patient an effective amount of a bisphosphonate. The invention further provides a method of treating a patient suffering from a malignant disease comprising administering to the patient an effective amount of a bisphosphonate. The invention further provides a method of treating a patient suffering from a malignant disease comprising administering to the patient an effective amount of a bisphosphonate. The invention further provides a method of treating a patient suffering from a malignant disease comprising administering to the patient an effective amount of a bisphosphonate followed sequentially by a method of treating a patient suffering from a malignant disease comprising administering to the patient an effective amount of a bisphosphonate. The invention further provides a method of treating a patient suffering from a malignant disease comp sequentially by an effective amount of a bisphosphonate. The invention further provides a method of treating a patient suffering from a malignant disease comprising administering to the patient an effective amount of a bisphosphonate followed sequentially by an effective amount of TRAIL.
